

Install TiviMate on Android TV or Fire TV

Follow these steps to install TiviMate and add an authorised IPTV account using either Xstream Codes-compatible details or an M3U playlist URL.

Official downloads

Google Play listing:

<https://play.google.com/store/apps/details?id=ar.tvplayer.tv>

Official TiviMate APK page:

<https://tivimate.com/apk>

For Fire TV, the official TiviMate site lists Downloader code **272483**. Confirm that the download page still shows **tivimate.com** before installing.

1. Install TiviMate

1. On Android TV or Google TV, open Google Play and install **TiviMate IPTV Player** by **Armobsoft FZE**.
2. On Fire TV, install the Downloader app, enter the official code or URL above, then install the APK. Delete the APK after installation and turn off unknown-source permission again.

2. Add your playlist

1. Open TiviMate and select **Add playlist**.
2. Choose **Xstream Codes** when you received a server URL, username and password. Choose **M3U playlist** when you received one complete playlist URL.

3. Enter the login details

1. **Xstream Codes**: enter the server address, username and password exactly as supplied. Give the playlist any clear name.
2. **M3U**: paste the complete M3U or M3U Plus URL. Add the separate XMLTV EPG URL if TiviMate asks for one and your provider supplied it.

4. Save and finish loading

1. Select **Next** or **Done** and allow the playlist, categories and TV guide to finish loading before opening a channel.
2. Open the TV guide and confirm that current programme information appears. If the guide is empty, refresh the playlist and check the EPG URL.

Important: TiviMate is designed for Android TV devices and remote-control navigation. It is not optimised for phones or tablets. Menu names can vary slightly between versions.

IPTV player apps do not include channels or a subscription. Only use playlists and streams you are authorised to access.
Official TiviMate website and Google Play listing - checked 28 July 2026.
